Assignment02_02

Viswa Gannu

June 2024

1 Important points

- New property: perspective, it is a 3D effect lower value gives more effect than a higher value. It is used in flip effects.

- It is advised to create a class it acts as a container in which our desired action is performed.

- Compared to display: inline, the major difference is that display: inline-block allows to set a width and height on the element.
  Also, with display: inline-block, the top and bottom margins/paddings are respected, but with display: inline they are not.

- setting background-repeat:no-repeat; allows user to keep small images also without repetition.

- Don't get stressed out at small things, solve it with a calm mind and be patient.
